Emergency Response

ArenaMind AI UI/UX Specification

Screen ID: ER-001

Version: 1.0

Status: Draft

Priority: ★★★★★

Overview

The **Emergency Response Module** serves as the AI-powered incident command center for FIFA World Cup stadium operations.

ArenaMind AI continuously monitors operational signals, detects anomalies, predicts risks, and coordinates emergency responses across security, medical, transportation, volunteers, and stadium operations.

Instead of simply notifying operators, the platform becomes an **AI Incident Commander**, providing real-time situational awareness and actionable response plans.

Product Vision

"Every second matters. AI should make every second count."

ArenaMind AI transforms emergency management from reactive coordination into proactive, AI-assisted decision intelligence.

Primary Users

- Emergency Operations Center
 - Stadium Security
 - Medical Response Teams
 - Fire & Rescue
 - Volunteer Coordinators
 - Transportation Authorities
 - FIFA Match Operations
 - Executive Leadership
-

Operational Objectives

The Emergency Response module enables operators to:

- Detect emergencies instantly
 - Assess operational impact
 - Identify affected areas
 - Coordinate response teams
 - Simulate evacuation scenarios
 - Broadcast multilingual instructions
 - Track incident resolution
 - Generate post-incident reports
-

Emergency Types

ArenaMind AI supports multiple incident categories.

Medical Emergency

Security Breach

Fire

Suspicious Object

Crowd Crush

Weather Alert

Power Failure

Infrastructure Failure

Transport Disruption

Missing Person

Lost Child

Evacuation

Cyber Incident

Every incident follows a unified workflow.

Screen Layout

Navigation + Emergency Status + Global AI Search		
Digital Twin + Live Incident Map		
Incident Timeline	AI Incident Analysis Live Camera & Sensors	Response Teams Recommendations
Command Dock + Emergency Broadcast Controls		

Incident Lifecycle

Every emergency follows the same AI-assisted workflow.

Detection

Post-Incident Report

Operators can track progress in real time.

Emergency Status Banner

Displayed at the top of the screen.

Example

Active Medical Emergency

Location

Section B12

Priority

High

Time Since Detection

01:42

AI Confidence

97%

Color changes according to severity.

Digital Twin Integration

The Digital Twin automatically focuses on the affected zone.

Visual indicators

- Red pulse
- Highlighted pathways
- Emergency exits
- Response team routes
- Crowd redistribution
- Safe evacuation corridors

Camera transitions are smooth and automatic.

Live Incident Panel

Displays detailed incident information.

Incident ID

ER-2026-0145

Category

Medical Emergency

Status

In Progress

Detected

18:42

Location

Section B12

Security

Volunteers

AI Incident Analysis

ArenaMind AI generates a contextual summary.

Example

Medical emergency detected in Section B12.

Current crowd density is moderate.

Nearest medical team can arrive in 2 minutes.

Crowd evacuation is not currently required.

Suggested response:

Deploy Medical Team Alpha.

Notify nearby volunteers.
Maintain security perimeter.
Broadcast localized guidance.

Generated automatically.

AI Confidence

Every incident includes an explainable confidence score.

Confidence

97%

Evidence

- Camera metadata
- Volunteer report
- Wearable alert
- Manual confirmation

Live Camera Integration

Future-ready interface.

Displays

- Camera ID
- Zone
- Live snapshot placeholder
- AI anomaly score
- Last update

Selecting a camera synchronizes the Digital Twin.

Resource Management

Shows all available emergency resources.

Medical

- Ambulances
- Doctors
- Nurses
- First Aid Stations
- AED Devices

Security

- Officers
- Patrol Units
- Checkpoints

Volunteers

- Available
- Assigned
- ETA

Resources update dynamically.

AI Recommendations

Recommendations are prioritized.

Example

Priority
Critical
Action
Dispatch Medical Team Alpha
ETA
2 minutes
Expected Outcome
Patient stabilized within 5 minutes
Confidence
95%

Operators may execute actions directly.

Emergency Broadcast Center

ArenaMind AI generates multilingual announcements.

Example

Attention.

Please remain calm.

Medical teams are responding.

Kindly avoid Section B12
and follow instructions
displayed on nearby screens.

Supported channels

- Stadium Displays
- Mobile App

- Public Address System
 - SMS (future)
 - Push Notifications
-

Evacuation Planner

Operators can initiate simulations.

Scenarios

Fire

Security Threat

Structural Failure

Weather Emergency

ArenaMind AI calculates

- Optimal exits
- Safe routes
- Estimated evacuation time
- Crowd redistribution
- Volunteer deployment

Results animate directly on the Digital Twin.

AI Scenario Simulator

Users can ask

What happens if Gate A closes?

What if heavy rain starts now?

How long would evacuation take?

ArenaMind AI produces predictive simulations.

Emergency Timeline

Displays chronological actions.

18:42

Incident detected

↓

18:43

Medical team assigned

↓

18:44

Crowd rerouted

↓

18:46

Patient stabilized

↓

18:48

Incident resolved

Command Dock

Supports natural language.

Examples

Dispatch nearest medical team.

Generate evacuation plan.

Summarize all active emergencies.

Broadcast announcement.

Open Camera 14.

Voice interaction supported.

Notification Center

Grouped by priority.

Critical

Warning

Information

Resolved

Notifications require acknowledgement.

Component Inventory

- Emergency Status Banner
- Incident Card
- Digital Twin Viewer
- AI Analysis Panel
- Resource Dashboard

- Live Timeline
 - Broadcast Console
 - Scenario Simulator
 - Command Dock
 - Notification Center
 - Camera Panel
 - Response Team Cards
-

Motion Design

Incident Detected

Red pulse

Camera focus

AI panel expands

Timeline updates

Response routes animate

Broadcast Sent

Notification ripple

Digital signage preview

Accessibility

Supports

- Keyboard navigation
- Voice commands
- High contrast mode
- Reduced motion
- Screen readers
- WCAG 2.2 AA

Emergency actions remain accessible without complex navigation.

Responsive Design

Desktop

Full mission-control layout.

Tablet

Digital Twin above AI panel.

Mobile

Incident-first layout.

Emergency actions pinned to bottom.

Empty States

● No active emergencies.

ArenaMind AI continues monitoring
all operational systems.

Loading Experience

Display

- AI synchronization
- Incident timeline skeleton
- Digital Twin initialization
- Resource loading animation

No generic spinners.

Error Handling

If a data source becomes unavailable

Live sensor feed interrupted.

Using latest synchronized operational data.

Monitoring continues.

If Gemini reaches rate limits

Switching AI engine...

Powered by Groq.

Incident context preserved.

The transition is transparent to the user.

Performance Targets

Metric	Target
Incident Detection UI	<1 s
AI Summary Generation	<3 s
Resource Update	Real Time
Digital Twin Focus	<500 ms
Interaction Latency	<100 ms

Technical Stack

Frontend

- Next.js
- React
- Tailwind CSS
- Framer Motion
- GSAP

Visualization

- React Three Fiber
- Three.js
- Google Maps Platform

Backend

- FastAPI
- Firebase
- Firestore
- WebSockets
- Pub/Sub

AI

- Gemini 2.5 (Primary)
- Groq (Automatic Fallback)
- Vertex AI
- Vision AI
- RAG Engine

Analytics

- BigQuery
 - Firebase Analytics
-

Acceptance Criteria

- Incidents appear automatically.
 - Digital Twin focuses on affected zones.
 - AI generates contextual summaries.
 - Recommendations include reasoning and confidence.
 - Emergency broadcasts can be generated instantly.
 - Scenario simulations update visually.
 - Timeline reflects all response actions.
 - Gemini → Groq fallback is seamless.
 - Accessibility meets WCAG 2.2 AA.
 - Interface maintains 60 FPS.
-

Future Enhancements

- Computer Vision incident detection
- Wearable emergency alerts

- Drone-assisted response visualization
 - Smart helmet integration
 - Multi-stadium emergency coordination
 - Cross-city command center
 - Apple Vision Pro incident room
 - AI-generated incident playback
 - Automated emergency compliance reports
-

<div align="center">

Emergency Response Philosophy

"In an emergency, operators should never wonder what to do next."

ArenaMind AI combines live operational intelligence, predictive analytics, and Generative AI to transform emergency response into a coordinated, explainable, and proactive decision-making system—helping teams act faster, communicate better, and keep every spectator safe.
